

# BANDING AND BONDING

Ever wonder what your colleagues have on their tray setups? As orthodontists, you rarely get the opportunity to see how other docs set up their workspaces. With What's on Your Tray, we present you with the specific instruments and products your peers are using in their practices. Interested in participating in this feature? Send us an email at [Editorial@farranmedia.com](mailto:Editorial@farranmedia.com)

## Daniel Grob, DDS, MS

### Scottsdale, Arizona

Dr. Daniel Grob is a university- and VA-trained prosthodontist who, after teaching and practicing for several years, returned to the Marquette University School of Dentistry to earn a master's degree and board certification in the specialty of orthodontics. After practicing both specialties in Milwaukee for two years, he and his wife moved to Tucson, Arizona in 1985 to care for patients and raise three children. While in Tucson, Dr. Grob and his business partner, Dr. Mark Donovan, grew a small practice into a three-office, three-doctor enterprise that was recently sold to two young orthodontists.

Dr. Grob relocated to Scottsdale, Arizona, where he continues to treat patients, with a special emphasis on comprehensive care and education. He has lectured extensively for Marquette University and Pima Community College and has been a member of the AlignTech Speakers Bureau for several years. He is the editorial director for *Orthotown Magazine*.
