

Company: DynaFlex
Product line: SmileShare Clear Aligners
Website: dynaflex.com/smileshare
Phone number: 800-489-4202

What specific physical characteristics set your aligners apart from others?

The company's proprietary aligner material, Glacier, offers a high range of activation and provides an optimal combination of force and flex. Providing the necessary rigidity to work out tough movements and the flexibility/forgiveness to be comfortable and adapt to all undercuts and gingival embrasures, Glacier offers maximum support and easy insertion and removal, and promotes healthy and precise tooth movement.

What features make your software and/or doctor dashboard unique and efficient?

The SmileShare treatment-planning software platform offers an efficient, intuitive, case submission process, allowing cases to be submitted in less than one minute. It includes two versions of treatment review software for quick review/approval, as well as hands-on editing options for moving and manipulating teeth or attachments in the treatment plan. The software also provides a link to send to patients for discussing the treatment plan using a timeline and 3D viewer.

Are particular scanners required to submit cases? If so, which brands?

DynaFlex accepts any STL files for aligner cases, and can receive scans directly through partnership from iTero, 3Shape, CS Connect, Sirona, 3M and Medit.

Discuss turnaround time, customer service and other logistical advantages of your aligners.

DynaFlex offers a three-to-five-day turnaround time for treatment review, an instant revision process with hands-on editing capabilities, and a 10-to-14-day delivery time of aligners from time of approval. All cases are designed by experienced orthodontic treatment planners in St. Louis, based on your treatment objectives. The company offers full-service onboarding and training for its platform to doctors and staff.

How does your company work with doctors who want to incorporate in-house 3D printing?

DynaFlex offers return of STL files for in-office printing on select minimal movement cases.

Provide average doctor cost per full treatment case, and/or volume-based cost tiers.

DynaFlex services range from \$350 and up, based on the system and the number of aligners needed. The full-service Unlimited System provides unlimited aligners, including refinement, for up to six years and one set of retainers retailing at \$1,600. The company also offers tiered pricing based upon volume.
