

Company: Great Lakes Dental Technologies
Product line: Smart Moves and Smart Moves Complete
Website: greatlakesdentaltech.com
Phone number: 800-828-7626

What specific physical characteristics set your aligners apart from others?

Smart Moves Complete aligners use ComfortTrack aligner material, a three-layer material with high-performance elastomeric properties. It generates ideal initial force to gently move teeth, and high strength resiliency to maintain tooth movement.

What features make your software and/or doctor dashboard unique and efficient?

Smart Moves Complete has a dedicated portal where doctors can submit, review and approve their aligner treatment.

Are particular scanners required to submit cases? If so, which brands?

No specific scanners are required. All major brands are accepted.

Discuss turnaround time, customer service and other logistical advantages of your aligners.

Upon approving a case, doctors can expect to receive aligners in two weeks. Great Lakes has expert customer support specialists available in the U.S. for all appliance needs, and aligner specialists are available to discuss case details.

How does your company work with doctors who want to incorporate in-house 3D printing?

Great Lakes can provide aligner setup services and is also a distributor of 3D printers, the BioStar and MiniStar thermoforming machines and ComfortTrack aligner thermoplastic. It also provides laboratory and appliance fabrication training.

Provide average doctor cost per full treatment case, and/or volume-based cost tiers.

The company elected not to share this specific information.
