ALIGNERS[®]

What specific physical characteristics set your aligners apart from others?

- For mild to moderate cases, the clear Essix material means patients wear the aligners with confidence while not having to worry about breakage because of the flexible, yet highly elastic and crack-resistant material.
- Easy-to-read raised numbers on molars make verifying each aligner number convenient. (Other brands use printed numbers on occlusal that are often illegible.)

What features make your software and/or doctor dashboard unique and efficient?

- More than 15 years of aligner experience means the company's technicians are trained to treatment-plan for best outcomes and avoid tracking issues, using the best software options on the market.
- Knowledgeable and friendly customer support will provide options for treatment and work to ensure doctors are completely satisfied with aligner set-ups they can approve with one click.

Are particular scanners required to submit cases? If so, which brands?

The company accepts files from all scanners on the market.

Discuss turnaround time, customer service and other logistical advantages of your aligners.

- Turnaround time is two weeks.
- Customer support will set up a doctor profile that includes their preferred way to communicate and preferred treatment preferences, reducing call time and need for revisions.
- Clear Image aligners are designed to move as much as possible in as few aligners as possible, shortening treatment time.

How does your company work with doctors who want to incorporate in-house 3D printing?

The company does not currently offer in-office printing options.

Provide average doctor cost per full treatment case, and/or volume-based cost tiers.

- Single-arch 10-aligner series: \$345.
- Dual-arch 10-aligner series: \$595.
- Simple cases (one to five aligners): \$45 per aligner.
- Tier pricing discounts are available.
