

# KLOWEN ORTHODONTICS

## CUSTOM METAL SELF-LIGATING BRACKET

**K**L Owen Orthodontics continues to innovate within the orthodontic industry, unveiling its latest custom solution at the annual AAO meeting. The newest addition to the full custom portfolio is the custom metal self-ligating (SL) bracket, striving to set a new standard in orthodontic care.

Distinguishing itself as the only custom SL bracket available, it is designed to deliver low friction and non-fatiguing ligation while maximizing control when using full-size wires. The precise fit combined with a custom prescription for each tooth delivers shorter ligation appointments, faster initial alignment and improved tooth positioning, optimizing control of all three orders.

Designed with a gingival offset and soft-touch corners, the custom bracket prioritizes patient comfort without compromising efficacy. The innovative design allows the door to open gingivally, eliminating the need for redundant opening and closing actions during appointments.

These efficiencies streamline procedures during appointments and alleviate stress for doctors, their teams and their patients.

With this innovation, KLOWen Orthodontics continues to confirm its commitment to providing personalized treatment solutions for every patient with its custom digital solution.

### HIGHLIGHTS

- **Control.** Experience the benefits of a conventional SL solution at the same time as torque control.
- **Efficiency.** Enjoy streamlined appointments and efficient wire changes with the innovative door design and the custom prescription.
- **Outcomes.** The digital setup precisely replicates in the real world using wires manufactured to fill the slot.
