

# SYNAPSE DENTAL

## DENTAL PAIN ERASER

**T**he Synapse Dental Pain Eraser is a portable, pen-shaped tool that can be easily used by both the clinician in the orthodontic office and the patient at home to provide instant relief from oral discomfort without the use of needles or medication.

The Dental Pain Eraser's probes send gentle, subsensory electric pulses to calm the nerves in the mouth and block pain for all soft and hard tissue orthodontic procedures, including debonding braces, bite correctors (Class II/III), wire and aligner changes, TMD, anchor placement, osteoperforation, aphthous ulcers, abrasions from dental and complex lingual fixed appliances, mucositis and general orthodontic discomfort.

This device can be used for a broad spectrum of dental treatments and oral disorders to target wherever the patient feels pain and is the only solution that is needle-free, drug-free and numb-free. Its ease of use allows people of all ages to be pain-free and anxiety-free during their orthodontic and dental appointments, and erase their oral pain at home, too.

### HIGHLIGHTS

- **Instant pain relief.** Starts working immediately to alleviate and prevent pain from dental treatment and oral disorders, avoiding the use of drugs and needles.
- **Long-lasting pain relief.** The effect of anesthesia is numb-free, lasts up to 48 hours and is safe enough to be used by all ages, even children without supervision.
- **Transforms the patient experience.** Patients can now be truly comfortable chairside and at home, which in turn drives revenue, new case starts, and referrals from colleagues and patients.
