

SOLVENTUM

CLARITY PRECISION GRIP ATTACHMENTS

Say goodbye to imprecision and hello to simpler, faster attachment bonding with Clarity Precision Grip Attachments—the first 3D-printed, fully-cured, pre-loaded attachments exclusively available with Clarity Aligners. Unlike traditional, technique-sensitive methods, Clarity Precision Grip Attachments minimize variability and messy cleanup, saving practices time while improving outcomes.

Each attachment is fully customized to match the patient's unique anatomy, promoting greater bonding consistency and seamless integration with Clarity Aligners. In clinical evaluations, doctors reported saving an average of 12 minutes per bonding appointment and noted improved aligner tracking and reduced need for refinements. Nearly 90% of doctors preferred the Grip system over their current method.

This innovation represents a leap forward in orthodontic care, enabling clinicians to work smarter and more efficiently while enhancing patient satisfaction.

HIGHLIGHTS

- **Precision:** Pre-filled attachments are precisely shaped and customized for every patient—and offer better tracking when compared to conventional attachments.
- **No excess composite (flash):** No flash to clear away, cutting down on appointment time and unwanted tooth movement.
- **Simplified process:** Pre-loaded attachments cut down on manual efforts, helping to eliminate technique sensitivity and reduce onboarding time for new staff.
